Setting a Language Pack

Instructors have the ability to change the language of a given course. This may be useful for foreign language courses in which students will be required to work in the target language. Instructors can also apply instructor-chosen language settings so that students are not able to change them.

1. Enter a course and enable Edit Mode.

2. In the Control Panel, expand the Customization menu and click on Properties.

3. Scroll down to section 6, Select Language Pack.

4. In the drop-down list next to Language Pack, select the desired language.

5. Check box to Enforce Language Pack if desired. This will require that students render this course in the selected language.

6. Click Submit.
